

## Tips & Tricks

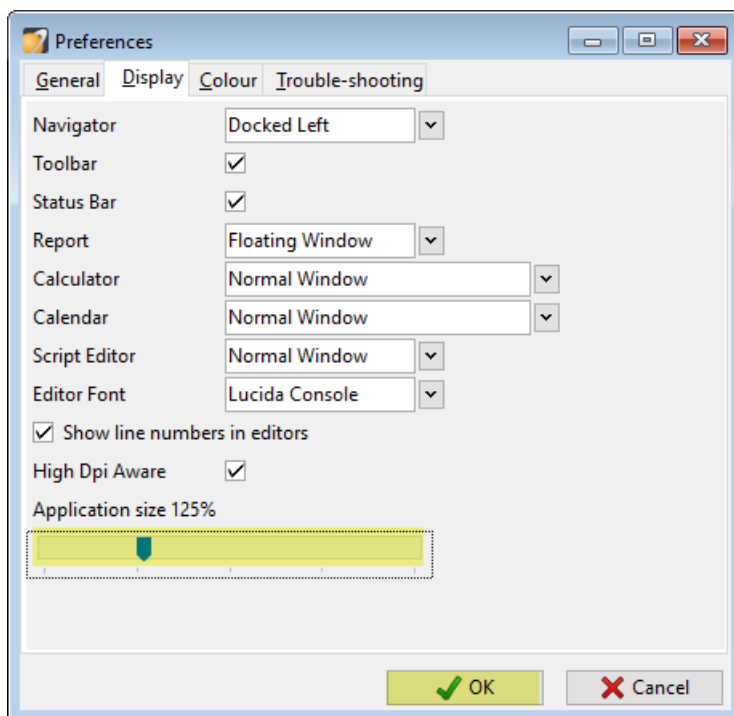

### Make Accredo Larger on your Screen without Affecting Windows

As of Windows 8, applications can be designed to opt out of being scaled by Windows on higher DPI display devices. Accredo version 4.0.10.126 has been made High DPI Aware, which means we can control the scaling inside the application without you having to change your scaling in Windows.

Scaling of the Accredo application size is applied on top of any Windows scaling for your Primary monitor.

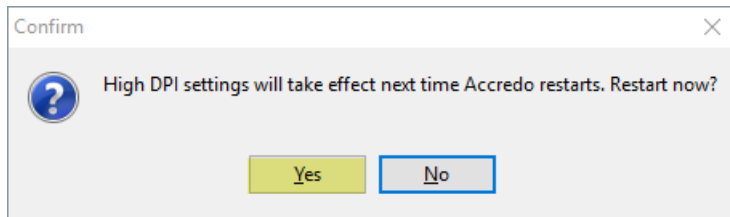

To increase the size of Accredo on your screen go to: Main Menu > View > Preferences > Display tab.

Drag the APPLICATION SIZE slider across to the desired size.

Click  **OK** (F9).

The following message will be displayed:

Click **Yes** (Alt+Y) to Restart Accredo.

Accredo will now display in the size you selected.
