

Another useful layout is to group each Price Code by Product. To do this, first Include Price Code by selecting it in the Visible field in the grid. And then enter a 1 in the Group field. (The number represents the grouping level – 1 is the outermost level of grouping.)

For this example, we have added a filter by Creditor as well and the resulting report will look like this:

Inventory Control - Price Code List
 ABC Holdings Limited
 Creditor: BRASS - Brassworks Ltd
 Customer Discount Code: 0

You can add multiple instances of the layout, grouped and customised differently to quickly report on whichever parameters you most commonly use. Choose **Add Layout** to add additional instances of the Price Code List report and rename it so you can easily tell which customisations have been applied.
